9 Discussion & Conclusions

In this section you should provide a general overview of your final model, its performance, and reliability. You should discuss what the implications of your model are in terms of the included features, predictive performance, and anything else you think is relevant.

This should be written with a target audience of a government official or charity directy, who is understands the pressing challenges associated with ageining and dementia but may only have university level mathematics (not necessarily postgraduate statistics or machine learning). Your goal should be to highlight to this audience how your model can useful. You should also mention potential limitations of your model.

Finally, you should include recommendations on potential lifestyle changes or governmental/societal interventions to reduce dementia risk.

Keep in mind that a negative result, i.e. a model that does not work well predictively, that is well explained and justified in terms of why it failed will likely receive higher marks than a model with strong predictive performance but with poor or incorrect explinations / justifications.

```
[152]: import pandas as pd
       results_df = pd.DataFrame({
           'Model Name': model_name,
           'Accuracy': accuracy scores,
           'Recall': recall_scores,
           'Precision': precision_scores,
           'F1 Score': f1_scores,
           'Balanced Accuracy': balanced_accuracy_scores
       })
       format_dict = {
           'Accuracy': '{:.4f}',
